Movie Database

CPSC 408 - Final Project
Debbie Lu

Problem

- Various streaming platforms are limited to what movies are available on their own platform
- For users who like having their own checklist:
    - Forces them to use different platforms to access the movies
    - Keep track of their personal checklist externally
- No personal rating/review feature through streaming platforms
    - Netflix removed this feature in 2018
    - Most other major streaming platforms do not have this feature

Solution

- Build a movie database!
- Allow users to search through various movies and find information on specific details in one place
- Track what users plan to watch and what they have already watched
- Allow for personal user ratings (on a scale of 1 to 10)

Schema
